MARCH 2025

STRAPPING IN TO SAFER SERVICES

Ensuring our team operates in a safe manner is our top priority. Installing and repairing equipment on radio towers requires our team to climb to varying heights.

Even with the best safety gear and training, there's always the risk that something could go wrong.

Thanks to the team at RIKLAN we were able to supply a 3-day rope rescue course to our team, supporting their current skillsets by giving them the confidence they need to assist in a worst-case scenario.

You can trust that when we commence a job on your site, our team is prepared for anything that comes their way, ensuring effective and efficient services.

AND SO MUCH MORE!

! URGENT UPDATE

ROTHENBUHLER SHOCK TUBE INITIATOR

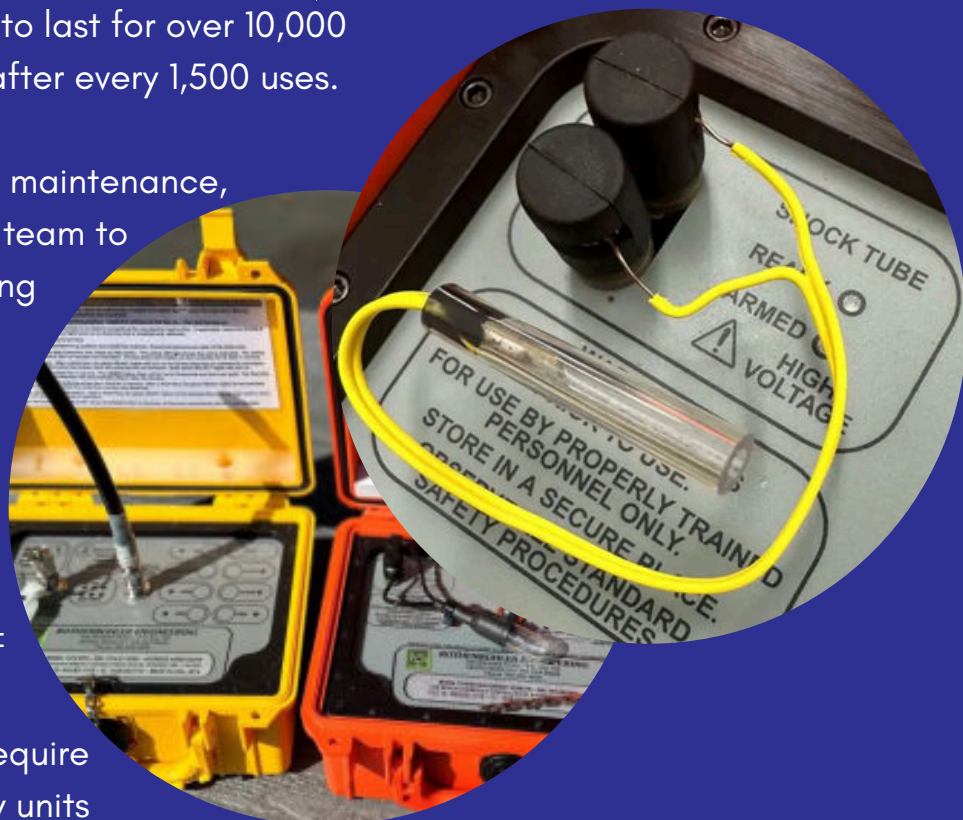

**DUKE PRO
SWITCH TIPS ARE
TEMPORARILY
UNAVAILABLE**

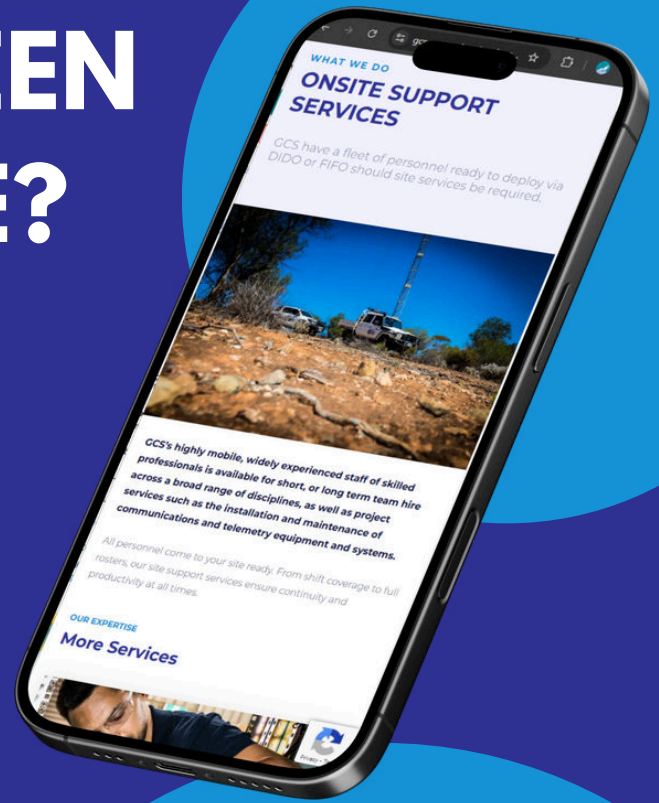

If you are currently using Rothenbuhler Remote Firing Devices for your mining operations, you may be affected by recent supply shortages caused by the war in Ukraine. Duke Pro switch tips are designed to last for over 10,000 shots, with recalibration required after every 1,500 uses.

If you have switch tips that require maintenance, you can book a check-up with our team to ensure your equipment is functioning effectively and efficiently.

If you don't have any shock tubes suitable for repair, Rothenbuhler have released new 1673 and 1674 high-energy units, which utilise Single shot bridge wires instead of the unavailable Duke tips, please contact your nearest GCS if you require a quote for these new high-energy units
